

LC 1/4 " series - Sample Cooler

LECOL LC series provide the most efficient cooling process. This unique design is suitable for most water and steam sampling applications. The unique helical coil design combined with the shell and tube structure achieves high-efficiency heat exchange and maximizes the cooling ability. Multiple tube sizes and lengths offer to conduct different scenarios and solve any possible sampling problem.

Our unique Dual Helical Coil design by seamless non-welded joints can provide an extensive heat exchange area for different applications, less maintain operation and prevent any potential leakage while strengthening safety and accuracy.

Features

- Standard 304 stainless steel body and inner tube are made by 316L seamless stainless steel providing a better corrosion resistance and longer lifespan.
optional body material 316SS
- Unique dual helical coil design provides an extensive heat exchange area up to 0.22 square meters to conduct numerous applications.
- Compact design minimizes cooling water needs
- The removable shell design leads can maintenance easily and cleaning procedure.
- For boiler water analysis, steam, cooling applications, or other sampling.
